Summary

The Center Cross School is a single story, wood frame classroom building designed in the Plain Traditional style. Its symmetrical eastern facade belies the "L"-shaped plan behind; the ell projects from the western elevation opposite, at the southern end. Its most distinctive feature is the low, horizontal hipped roof and the hipped roof over the front porch that echoes that of the main building. All the roof surfaces are covered with asphalt shingles, the walls are sheathed with novelty siding, and the entire structure rests upon stone piers.

Elaboration

The Center Cross School is a single story, wood frame classroom building designed in the Plain Traditional style. Its symmetrical eastern facade belies the "L"-shaped plan behind; the ell projects from the western elevation opposite, at the southern end. Its most distinctive feature is the low, horizontal hipped roof and the hipped roof over the front porch that echoes that of the main building. Two brick chimneys project from the rear or western slope of the building, and a louvered, square roof vent with hipped roof projects from the center of the roof ridge. All the roof surfaces are covered with asphalt shingles, the walls are sheathed with novelty siding, and the entire structure rests upon stone piers.

The front or eastern elevation is dominated by the spreading, hipped roof front porch supported upon six box columns standing on low brick piers. The wall beneath is symmetrically-divided into two double-leaf entrances placed toward either end, with a single six-over-six wood sash finishing each end. Two more six-over-six wood sash windows are placed between the entrances. The western elevation is composed of the end of the hipped roof ell, its gallery, and the rear wall of the main section. The end of the ell is lighted with two symmetrically-placed six-over-six wood sash windows. The gallery is placed to the north and leads directly to a central, single-leaf door in the rear of the building. The wall to the north is lighted with two six-over-six wood sash windows and accessed via a single-leaf door placed toward at the end of the elevation.

The southern elevation is composed of the side of the rear ell and the end of the main section. The main section is lighted by two symmetrically-placed six-over-six wood sash windows and the ell's side wall is lighted by another identical window. The northern elevation is lighted by three six-over-six wood sash windows placed asymmetrically across the end of the main front section, and accessed only via a single-leaf door in the side wall of the rear ell, beneath the gallery roof.

Section number 8 Page 1

Center Cross School

The community of Altus was so named because, at its incorporation in 1888, it was the highest point on the Little Rock & Fort Smith Railroad. During the late 1920's, the area began to experience a building boom as a result of the vibrant local economy, driven by the prosperous wine industry, coal mining, and resort investments by the Chicago millionaire, J. H. Jacobson. The Center Cross School was built in 1930 to accommodate the demand for improved educational facilities in the increasingly affluent region; the economic consequences of the 1929 stock market crash would not be felt in Franklin County for several more months.¹

The Center Cross School, constructed during the period covered by the historic context *The Evolution of the Public School System in the Arkansas Ozarks, 1920-1940*, is a representative example of a small, wood frame school building constructed for a rural school district. Its use during this period as a local school building clearly identifies it with this historic context and with this property type. It is significant locally under Criterion A through its direct associations with the history of the evolution of the public school system in the Ozark Mountain region of the state during this period.

¹Virginia Canady, Altus, Arkansas: 100 Years, 1888-1988 (Altus, Arkansas: 1988).
