ARCHITECTURAL SIGNIFICANCE of area. (Describe physical setting, general character, and architecturally significant structures).

The Union Mills complex contains one of the earliest remaining mills in Fall River, dating from 1859. Located on the east side of the Quequechan River, the Union was one of the first in the city to be powered by steam and was the first mill to be built above the falls, a change made possible by the new steam engines and made necessary by the fact that all suitable locations near waterfalls were by then fully occupied. The 1859 mill was designed by Josiah Brown, the first builder of local mills who can be considered a professional designer. Brown was self-educated and had traveled to Europe for study and observation. He was assisted in this early effort by Wm. C. Davol. Brown later designed the Robeson, Border City, Fall River Manufactory and Montaup, of which the first two survive. The Union, originally 5½ stories high, is of the narrow mill type and measures 160' X 70'. It was constructed of irregular granite ashlar with parged joints, in a style vaguely reflective of Italianate influences. As was typical of granite mills of the period, walls at the base were over 3 feet thick and floor timbers were 12" X 16" supported on heavy iron columns. Except for changes in the roofline, (Cont

HISTORICAL SIGNIFICANCE of area. (Explain development of area, what caused it, and how it affected community; be specific).

The Union Mills Company, incorporated in 1859, was the first Fall River textile company to be financed by community stock subscriptions. The idea of a mill corporation owned by shareholders was conceived by Hale Remington, who invited others to participate including S. A. Chace, the company's first president, and David Anthony, the first treasurer. Capital of \$175,000 was raised from twenty subscribers, all described as "gentlemen" with holdings from \$1,000 to \$2,000. The original 1859 print cloth mill, among the first in the city to be powered by steam, had a capacity of 15,000 spindles. During the war the enterprise was sufficiently profitable to allow construction of a second mill of 30,000 spindles in 1865 without any increase in capital or assessment of stockholders. During the financial troubles of 1879, the property was sold to creditors and reorganized as the Union Cotton Manufacturing Company, capitalized at \$750,000. A third mill brought capacity to 89,608 spindles and 2,122 looms. During peak years of production following World War I, capacity reached 110,816 spindles and 2,837 looms with 900 employed in the production of print cloth and wide goods measuring 30 million yards annually. The Union Mills paid cash dividends which averaged 20.7 percent between 1911 and 1925, a record equalled by only one other Fall River mill. Within a few years, however, Fall River's mill economy collapsed and the Union closed in 1929. Buildings are presently used for retail space, light manufacturing and storage.

INVENTORY FORM CONTINUATION SHEET

MASSACHUSETTS HISTORICAL COMMISSION
Office of the Secretary, Boston

Community:

Fall River, Mass.

Form No:

N-23-1/4/6

Property Name: Union Mills

Indicate each item on inventory form which is being continued below.

ARCHITECTURAL SIGNIFICANCE (Continuation)

the Union is representative of the early period of Fall River mill architecture. The cotton machinery was built by Marvel, Davol & Co. of Fall River and Wm. Mason of Taunton. The engine by the Corliss Steam Engine Co. of Providence was of the type which was to become famous throughout the manufacturing world. One of its advantages was that the exhaust steam could be used for dressing the loom warps and in winter for heating the buildings. The Union was the first mill in Fall River to be heated in this manner. The contract with the Corliss Company stated that the mill could either pay a fixed sum or the amount saved in energy over a period of time, and the management quickly paid the stipulated amount because the economy was so marked. This type of engine was used in most subsequent factories until the Globe Yarn Mills #2 of 1886-7. In 1865 a second granite mill, 282' X 72', and ells were constructed, along with a cotton storage house and office. In 1878 a third brick mill was built, and in 1890 a separate engine house and boiler house were added to Mill #2, and all three mill buildings were altered with the removal of their gable roofs and addition of an upper story, overhanging bracketed cornice and low-pitched roof. Nine buildings remain including Mill #1 and one ell, Mill #2 and picker house, boiler house and engine room, a brick storage house and a later engine room attached to Mill #1. Most of the buildings are granite, giving the complex a unity of materials in addition to its early feeling;

The Union Mills Complex is one of the city's earliest remaining mills, associated with a prominent local architect, and reflects the monumental granite architecture of the period. It also represents a substantial period of post-war industrial expansion, and thus meets criteria A and C of the National Register.
